Build *Superafast*[®]

#1 ERP Software for the Construction & Infrastructure Industry

About Us

Started in 1986 by a team of Technocrats, Micromen was one of the earliest players in the customized application software service in Chennai. Today, company employs over 100 highly trained professionals on its payroll in the areas of Development, Marketing and Customer Support. Micromen regularly imparts training to its employees on the latest technologies and leverages individual special capabilities to make them stand out as true professionals.

Headquartered in Chennai with a branch office in Bengaluru and channel partners across India and the Middle East, Micromen counts amongst its clients some of the biggest names in the construction industry from developers and contractors to infrastructure companies and architects.

BuildSuperfast

Born out of years of profound research and dedicated service to the construction and infrastructure industry, BuildSuperfast has emerged as a leader in providing comprehensive enterprise solutions chiseled to meet the unique demands of this ever-growing domain. Today, the product enjoys an enviable brand equity in terms of reliability and efficiency, with a proven track record of providing innovative and unparalleled business solutions and an impressive list of satisfied clients across India and the Middle East.

Over the years, BuildSuperfast has kept pace with advances in technology as well as changes in the infrastructure domain thereby ensuring a seamless and intuitive user experience. Designed to automate business processes and increase efficiency, BuildSuperfast connects users and information from multiple sites to ensure successful project completion.

BuildSuperfast optimizes your operations by:

- Improving workflow and increasing efficiency.
- Effectively managing budgets and schedules with a keen eye on profitability and quality control.
- Coordinating on-the-job projects and tasks with employees, site staff, architects, clients, vendors other subcontractors.
- Using predictive analysis to enable users to have a better understanding of projects and enable them to make pro-active decisions with ease.
- Providing users with access to centralized data repository and facilitating knowledge sharing.
- Providing automated task alerts and instant real time reporting with deep learning MIS.
